Genetics Co., Ltd.

Korea Animal Hospital

About Genetics

Genetics Co., Ltd. is a Korean livestock biotechnology company specialised in **dairy embryo production, embryo transfer and reproduction management**. Together with its affiliated veterinary hospital, Korea Animal Hospital, the company has been in the embryo business for **21 years**, producing and transferring Holstein embryos for Korean dairy farms and exporting **Korean Holstein sexed (female) dairy embryos** abroad.

Key figures

- Established in **2005** in Anseong, Gyeonggi-do – the centre of Korea's dairy industry
- **21 years** of embryo production and embryo transfer
- About **10,000 embryos produced and transferred per year** over the last 10 years
- Conception rate of about **60%** for sexed, frozen IVF embryos transferred abroad over the last five years
- Embryo export and on-site transfer support in **Uzbekistan, Mongolia and Kyrgyzstan**

Item	Details
Company	Genetics Co., Ltd. (Republic of Korea)
Affiliate	Korea Animal Hospital – veterinary hospital specialised in embryo transfer and reproduction
Established	2005
CEO	Dr. Hyunjae Ha, DVM
Veterinary team	Dr. Hyunjae Ha, Dr. Kwangtaek Lim, Dr. Donghwan Shin, Dr. Mincheol Kim, supported by laboratory researchers
Core business	In-vitro embryo production (IVF), sexed embryos, embryo transfer, genomic selection, recipient-cow programmes, reproduction consulting, embryo export

CEO – Dr. Hyunjae Ha, DVM

- Doctor of Veterinary Medicine, Konkuk University; Adjunct Professor, Konkuk University.
- 21 years in embryo transfer and in-vitro fertilisation; long career in large-animal veterinary practice.
- Breeder of A2A2 Jersey cattle and operator of an organic dairy farm (Song Young Shin Farm).
- First to introduce smaXtec rumen-sensor monitoring to Korean dairy farms.

Business

Area	Description
Embryo production	In-vitro production of Holstein embryos fertilised with sexed semen; grading, freezing and inventory management in our own laboratory
Embryo transfer	Transfer of fresh and frozen embryos on dairy farms by our veterinary team
Recipient programmes	Recipient selection, oestrus synchronisation and pregnancy diagnosis
Genetic improvement	Genomic selection and long-term breeding plans for dairy herds
Embryo export	Export of Korean Holstein sexed dairy embryos with health certificates and embryo identification records
Training and consulting	Training of veterinarians and technicians in embryo transfer, thawing, pregnancy diagnosis and heifer rearing
Herd monitoring	Rumen-sensor monitoring and data platform (CowTalk AI) for reproduction and health management

Technology

Step	Method
Oocytes	Collected from ovaries of Korean Holstein cows
Fertilisation	In-vitro fertilisation with **sexed semen** from selected sires – about 90% female calves
Culture	Each embryo cultured **individually**, keeping its dam and sire identity for full traceability
Grading	By stage and quality following IETS guidance
Freezing	Slow freezing in ethylene glycol for **direct transfer** – thawed and transferred on the farm like a semen straw
Documentation	Embryo ID list, donor and sire records, health certificate

International Experience

Country	Activities
Uzbekistan	Korean Holstein sexed embryo supply in cooperation with Korea's Rural Development Administration (RDA); on-site transfer support; rumen-sensor herd monitoring pilot
Mongolia	Dairy embryo export and on-site transfer support
Kyrgyzstan	Dairy embryo export and on-site transfer support
